EXPERIENCE

React Developer

Freelance

11/2022 - current

Full Remote

- Web application development and maintenance
- Requirements refinement
- Development environment maintenance
- Survey of customer needs

Description:

Project kick-off and initialization of developer environments.
Track technical debt and support junior developers with their tasks.

React Native Developer

Fizzmod

12/2020 - 11/2022

Hybrid - Buenos Aires, Argentina

- Android apps development built with React Native (react native CLI, no expo).
- CI/CD - Bitbucket pipelines for automated publishing on Play Store.
- Unit testing with Jest.
- Usage of several react native packages (expo modules, react navigation, expo barcode scanner, etc).
- Code review via pull requests.
- Agile methodologies - Scrum.
- Definition of user stories along with product owners
- Tech lead of the frontend development team assisting in the organization, definition and maintenance of the projects.

Description

- Janis WMS App

Janis WMS

The project consists of building an app that allows keeping updated the control of a warehouse by registering the movement of merchandise.
The app is built with React Native for Android. Different NPM libraries are used (Redux like state manager, styled-components, some expo packages, etc). Unit testing 100% test coverage with React testing library & Jest. Versioning is kept with GIT in a bitbucket repository. CI/CD strategies were implemented via Bitbucket pipelines.

Also supported by:
Jira Figma Scrum

This app is currently in production and officially launched.
- Janis Picking App

Janis Picking

The main goal of this app is to provide a tool for warehouses employees to keep track of merchandise stock and help them to prepare clients orders.
The app is built with React Native. Different NPM libraries are used (Redux like state manager, styled-components, some expo packages, etc). Unit testing 100% test coverage with React testing library & Jest. Versioning is kept with GIT in a bitbucket repository. CI/CD strategies were implemented via Bitbucket pipelines.

Also supported by:
Jira Figma Scrum

This app was successfully released in August 2022 and very well received by customers.

- Janis Delivery App

[Janis Delivery](#)

The goal of this app is to help drivers to keep track of their delivery routes and shipping statuses.

The app is built with React Native. Different NPM libraries are used (Redux like state manager, styled-components, some expo packages, etc). Unit testing 100% test coverage with React testing library & Jest. Versioning is kept with GIT in a bitbucket repository. CI/CD strategies were implemented via Bitbucket pipelines.

Also supported by:
Jira Figma Scrum

Another app successfully launched in July 2022.

Front-end Developer

Fizzmod

07/2017 - 11/2020

Hybrid - Buenos Aires, Argentina

- Front end development and maintenance of responsive e-commerce sites.
- E-commerce sites based on Vtex platform.
- Code review via pull requests.
- Agile methodologies (Scrum)

Description

- Jumbo Argentina. First project assignment

<https://www.jumbo.com.ar>

The project assignment consisted in implementing an e-commerce site under the VTEX platform.

The site was successfully launched and for the following months after the first release I remained an active part of the team leading the maintenance of the site.

- Support & Maintenance

After becoming one of the referrals within the front-end area, I was assigned, along with my main assignments, to collaborate in the coordination and maintenance of several productive projects that required support and new features developments.

I've maintained several e-commerce sites:

<https://www.wong.pe>

<https://tienda.personal.com.ar>

<https://www.crateandbarrel.com.co>

<https://www.crateandbarrel.com.pe>

<https://www.sportline.com.ar>

Delivering optimizations and new features.

- Vtex Ecommerce Template

As part of the company's front end referral team I took part on developing the company e-commerce site template based on VTEX platform. The main goal was to ensure that any member of the front end team can be able to implement an e-commerce site in VTEX in less than 1 month.

To achieve this we decided to build a template that was easily replicable and that already had a basic configuration to deploy it to production as soon as possible.

The result was a complete success. Not only was I able to be part of building a template from scratch and with a modern technological stack, but also the assumptions were fulfilled and we achieved that any member of the team could implement a new store in 2 weeks. Some of the sites implemented with the template are:

<https://www.mote.com.uy>

<https://www.comodinencasa.com.ar>

<https://www.geant.com.uy>

<https://www.tata.com.uy>

<https://www.hiperlibertad.com.ar>

<https://www.autodo.com.ar>

<https://www.telasxmetro.com>
<https://www.florayfauna.pe>

Web Developer

Freelance

01/2015 - 07/2017

Buenos Aires, Argentina

- Implementation and maintenance of Wordpress sites. Customization of widgets and themes. PHP, HTML5, CSS3.
- Agile methodologies - Scrum.
- Definition of user stories along with customers

Description

I took several requirements regarding this local marketing agency. I built different institutional sites.

Mostly wordpress sites. Also I have to modify templates or create/adapt widgets.

This was my first experience as a developer and I learned a lot about dealing with customers and be self organized with deadlines and requirements.
